

NORTHERN NEUQUEN

Argentina

Copahue Area

DESCRIPTION

Two test-wells have been drilled to confirm the existence of vapor dominated geothermal fluid of which temperature is around 230°C.

It is expected that the geothermal energy will suffice local power supply.

NAME OF CLIENT:

Centro Regional de Energia Geotermica del Neuquen (CREGEN)

SERVICES:

Feasibility Study (November, 1987 - March, 1990)
