

RAFSANJAN WATER CONVEYANCE PROJECT

Iran

Project Site

DESCRIPTION

Rafsanjan Water Conveyance Project which utilizes runoff of the Sulakan River of Karoon Tributary has been formulated in order to fulfill some of water deficit in the development of pistachio cultivation in Rafsanjan Plain.

The Rafsanjan Water Conveyance Project consists of a storage dam on Sulakan River, water conveyance tunnel, transmission pipeline and pumping system. Implementation of the Project is indispensable to sustainable development of cultivation activities and harvests in Rafsanjan Plain, which is sure to contribute to the relief from over supply and conservation of quality and quantity of the Rafsanjan aquifer.
