

# TEDORIGAWA

Japan

General View of Tedorigawa Dam

## DESCRIPTION

This project is multipurpose, including flood control, water supply and power generation with an installed capacity of 250MW. The rockfill dam

constructed on the Tadori River is 153m high and 10million m<sup>3</sup> in embankment volume. During the construction, both the core embankment and the water impoundment were scheduled based on pore pressure behavior in the core and seepage through the foundation that wear measured through the construction period.

## NAME OF CLIENT:

Electric Power Development Co., Ltd.(EPDC)

## CAPACITY: 250MW

## SERVICES:

Feasibility Study(November,1969-October,1972)

Detailed Design(December,1972-October,1974)

Construction Supervision (December,1974 - January,1980)

**EPDC**
