

**J-POWER Constructs Onabara Power Plant**  
**Construction of Hydroelectric Power Plant Utilizing Ecological Flow**

Electric Power Development Co., Ltd. (hereafter “J-POWER”) announces that it has decided to construct Onabara Power Plant in Japan.

This project is to construct a hydroelectric power plant, of which maximum capacity is 990kW, just below the existing Tedorigawa Dam. This power plant will utilize unused ecological flow from Tedorigawa Dam.

J-POWER will start preparation for construction aiming for starting commercial operation in November 2024.

J-POWER actively continues to develop small and medium scale hydroelectric power plants to utilize carbon free and renewable water resources.
